

CONTACT TRACING FOR COVID-19 IN NATIONAL AMBULANCE

Author: CLINICAL SERVICES
Version & Date Last Modified: V8 29-Mar-2022

*Unprotected Exposure to a confirmed COVID-19 person:

- Clinicians are required to wear a surgical mask at all times in the work place and to practice distancing of no less than 2 meters to avoid close contact exposure.
- In responding to all cases, it is the responsibility of the clinicians to wear the minimum standard PPEs – surgical mask, eye protection and gloves and practice hand hygiene before putting and after doffing PPEs.
 - If responding to critical or cardiac arrest cases, the staff will wear the proper PPEs for suspected COVID-19 cases (N95 Mask, goggles/face shield, gown and gloves.).
 - If staff is dealing with a confirmed COVID-19 case, the staff will wear the proper PPEs for confirmed case (N95 mask, goggles/face shield, full suit, shoe cover if available and double gloving gloves).
 - If you are assigned to transport more than 1 confirmed COVID-19 patient in different trips with no stops at the station, staff will continue to using the same PPE except for the outer gloves to be replaced or when the PPEs have been soiled by blood or body fluids.
 - All staff are responsible to wear mask and safe distance outside of the work place.
